

Perl 6.d (Diwali)

Coming in 2018

New in 6.d: `await` no longer blocks a thread while waiting. This speeds things up and avoids deadlocks. Try it out today with Rakudo compiler and `v6.d.PREVIEW` pragma:

```
use v6.d.PREVIEW;  
await ^10 .map: { start await ^25 .map: { start await Promise.in: 1 } }  
say "It took $(now - ENTER now) seconds to run";
```
